Layered DAG

What is a Layered DAG and why is it relevant to 1D SDC?

Features of a Layered DAG

What features of a Layered DAG make it useful for this particular problem?

MFE and Thermodynamic Favourability

Calculating the MFE of a 1D SDC as a Layered DAG traversal problem.

Traversal

What Algorithm can we use to traverse the Layered DAG? And what will a traversal of the Layered DAG give you?

Existing MFE Implementation

How does this approach compare to other approaches, such as the DP approach?

Performance

What is the performance of the shortest path through the Layered DAG?

Conclusion

What are the next steps?
